

How to Use This Dashboard

Public Health Risk & Funding Dashboard Guide

This dashboard provides a structured example of how public health data can be organized and visualized using a risk scoring model to support decision-making.

It is designed to help users explore county-level patterns, identify high-need areas, and understand how data can inform funding, reporting, and program planning decisions.

This type of dashboard can be used to support funding decisions, identify high-need areas, and communicate insights to stakeholders.

How This Dashboard Is Used

This type of dashboard is commonly used to:

- Identify high-need counties for program targeting
- Support grant writing and funding proposals
- Monitor public health trends
- Communicate insights to stakeholders

Getting Started

Download Power BI Desktop (free) if you don't have it.

Note: Power BI Desktop is a free download from Microsoft.

Step 1: Open the Power BI Dashboard

Open the (.pbix) file to review the completed dashboard and explore the existing visuals.

Step 2: Exploring the Dashboard

Review the dashboard components:

- KPI cards (average, highest, lowest risk)

- County risk ranking chart
 - Visual layout and structure
-

Step 3: Understand the Data

Refer to the dataset and data dictionary to understand how the risk score is calculated and what each variable represents.

Step 4: Customizing the Dashboard (Optional)

Use the Power BI template (.pbit) or modify the dashboard to:

- Add new variables
 - Adjust visuals
 - Apply your own dataset
-

No advanced Power BI experience is required to use this dashboard.

Important Note

This dashboard is provided as a structured example and reference tool. It is not a step-by-step training course, but rather a framework to help users understand how data can be organized and visualized for decision-making. Users are encouraged to explore, adapt, and build on this structure based on their own data and needs.

About the Creator

This dashboard was developed by LaTonya Bynum, MPH, MCHES, based on experience supporting Medicaid analysis, program evaluation, and funding decision-making.

Next Step

Organizations typically implement this as a full dashboard and tracking system within 2–3 weeks to improve reporting, funding decisions, and program visibility.

If you need support customizing this dashboard for your organization or program, feel free to reach out: <https://linktr.ee/sisspeakslife>
